

# GEA Diessel

## Complete Sterile Process Lines

GEA Diessel is a leading specialist in the supply of complete liquid processing plants for the pharmaceutical and biotech industries. Based in Germany, GEA Diessel is ideally placed to supply top quality components, bespoke systems and complete processing plants worldwide.

Parenterals

Fermentation and media supply

Syrup and suspensions

Blood plasma

Special liquids

Highly purified media

### Metering with a new precision: the IZMAG™

#### The IZMAG™ electromagnetic standard flow meter

Effective use of resources and minimising risk are two keywords that are of real significance for manufacturing companies. Quality is demanded at the highest level especially for sensitive manufacturing processes. To monitor and optimise what is happening during the production process it is not only important to know if something is flowing but also the volume that is flowing through the pipes at any one time.

The new electromagnetic standard flow meter IZMAG™ fulfils these requirements at the highest level. With over three decades of flow measurement experience the product's developers have continued the tradition of outstanding quality that became world famous in the electromagnetic flow meters from GEA Diessel.
